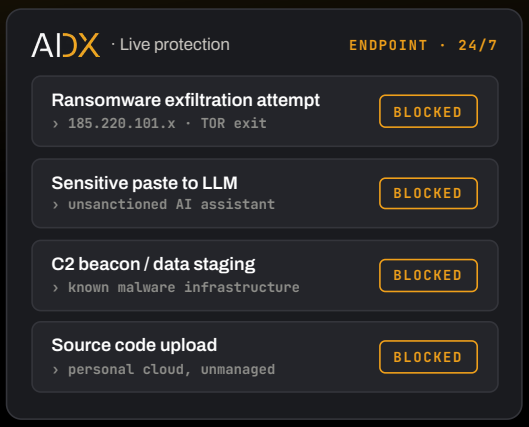
ANTI DATA EXFILTRATION

AI on, exfiltration off.

BlackFog ADX stops sensitive data leaving the device, **whatever sets it in motion.** Ransomware. Shadow AI. Insider threats.

ON-DEVICE · REAL-TIME · PREVENTION-FIRST



One mission. Nothing leaves.

THE PLATFORM

ADX Vision governs AI use and intercepts sensitive data before it's sent. ADX Protect prevents data exfiltration. Together, they protect data at the point of movement, on the device, in real-time.

Powerful alone, complete together.

ONE AGENT · ONE CONSOLE · END TO END

AIDX Vision 2.0

Expose Shadow AI. Control what leaves.

- Seven layers of prompt protection
- Custom policies at company or departmental level
- LLM redirection to sanctioned, licensed services
- Optional prompt auditing and unified token visibility

ADX Vision measures usage across all major vendors from the endpoint.

AIDX Protect

Stop unauthorized data before it leaves.

- Blocks ransomware and double-extortion exfiltration
- Severs C2, TOR and known-bad infrastructure
- Stops insider and accidental data loss

98% of ransomware attacks now end in data exfiltration.
Backups can recover encrypted files. They can't recover stolen data. Stop the exfiltration, and you remove the leverage behind double extortion.

\+

AIDX Instinct
Virtual CISO

› **Two products on one agent. Three if you want us to run it.**
Most vCISOs advise. Ours protect 24/7.

OPTIONAL ADD-ON

Protection across the data lifecycle.

01	02	03	04	05	06
AI interaction	**Policy**	**Infiltration**	**Replication**	**Communication**	**Exfiltration**
Prompts, pastes and uploads are checked against policy first.	Sanctioned and Shadow AI are identified by behavior.	Exploits are stopped; prompt injection is caught in AI tools.	Lateral movement spreads foothold.	C2 beacons call home for orders.	Data attempts to leave the device. ADX blocks it at the source.

AIDX Vision AI GOVERNANCE

AIDX Protect EXFILTRATION DEFENSE

Every exit covered.

PROTECTION AT THE POINT OF MOVEMENT

Built to prevent exfiltration.

01 Profile

AI behavioral analytics baseline every process and outbound connection. No signatures required.

02 Detect

Fileless, polymorphic, zero-day, and insider threats surface by behavior, in real-time.

03 Block

Unauthorized data transfer is stopped at the source, before it ever leaves the device.

› **Decisions made on-device, at the process level.** No rules to write, no signatures to update.

The prevention layer you're missing.

HOW IT COMPARES

DLP, CASB, EDR and DSPM each address different aspects of data and threat protection. ADX adds an endpoint-native anti data exfiltration layer, using behavioral analysis to control unauthorized data movement in real-time while complementing your existing stack.
